Overview

[edit]

Programming model: Abstraction of a computer system, for example the "von Neumann model" used in traditional sequential computers. For [parallel computing](#), there are many possible models typically reflecting different ways processors can be interconnected. The most common are based on shared memory, distributed memory with message passing, or a hybrid of the two.

A [programming language](#) can support [multiple paradigms](#). For example programs written in [C++](#) or [Object Pascal](#) can be purely [procedural](#), or purely [object-oriented](#), or contain elements of both paradigms. Software designers and programmers decide how to use those paradigm elements.

In [object-oriented programming](#), programmers can think of a program as a collection of interacting objects, while in [functional programming](#) a program can be thought of as a sequence of stateless function evaluations. When programming computers or systems with many processors, [process-oriented programming](#) allows programmers to think about applications as sets of concurrent processes.

- Concatenative
- Concurrent computing
- Declarative (contrast: Imperative)
 - Functional
 - Dataflow
 - Cell-oriented (spreadsheets)
 - Reactive
- Constraint
- Logic
 - Constraint logic
 - Abductive logic
 - Inductive logic
- Event-driven
 - Service-oriented
 - Time-driven
- Expression-oriented
- Feature-oriented
- Function-level (contrast: Value-level)
- Imperative (contrast: Declarative)
 - Procedural
- Non-structured (contrast: Structured)
 - Array (contrast: Scalar)

SAVE PROFILE

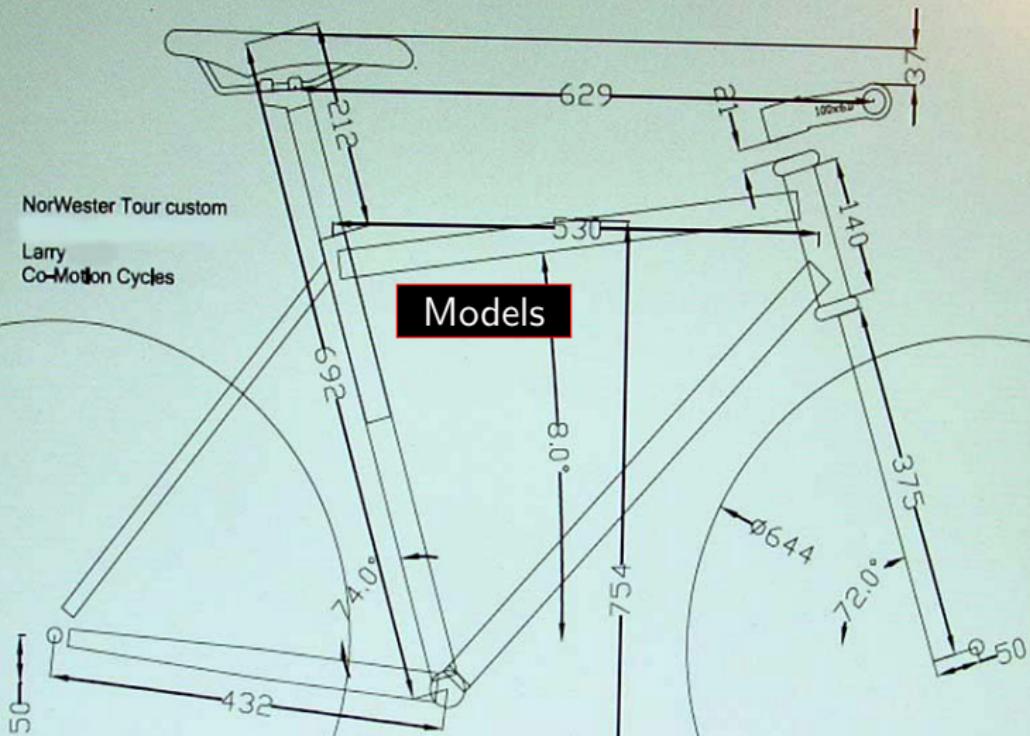

Use a Model Form

```
>>> from django.forms import ModelForm

# Create the form class.
>>> class ArticleForm(ModelForm):
...     class Meta:
...         model = Article

# Creating a form to add an article.
>>> form = ArticleForm()

# Creating a form to change an existing article.
>>> article = Article.objects.get(pk=1)
>>> form = ArticleForm(instance=article)
```

Model Syntax

```
from django.db import models

class Post(models.Model):
    title = models.CharField(max_length=100)
    text = models.TextField()
    datetime = models.DateTimeField()

    class Meta:
        ordering = ('-datetime',)

    def __unicode__(self):
        return self.title

class Comment(models.Model):
    post = models.ForeignKey(Post)
    text = models.TextField()
```

Model API

```
>>>from blog.models import Post, Comment  
>>>post = Post.objects.all()[0]  
>>>post_comments = post.comment_set.all()
```

Save Foreign Keys

POLL

Enter your question here

Use Model Formset

```
from django.forms.models import modelformset_factory
AuthorFormSet = modelformset_factory(Author)
formset = AuthorFormSet()
>>> print formset
<input type="hidden" name="form-TOTAL_FORMS"
value="1" id="id_form-TOTAL_FORMS" />
<input type="hidden" name="form-INITIAL_FORMS"
value="0" id="id_form-INITIAL_FORMS" />
<input type="hidden" name="form-MAX_NUM_FORMS"
id="id_form-MAX_NUM_FORMS" />
<tr><th>
<label for="id_form-0-name">Name:</label>
</th><td>
<input id="id_form-0-name" type="text"
name="form-0-name" maxlength="100" />
</td></tr>
```

Model Formset options

```
formset = AuthorFormSet(qs=Author.objects.all(),  
                       extra=5)  
  
formset.is_valid()  
  
formset.errors  
{'name': 'This field is required'}  
  
formset.changed_forms  
  
formset.save()
```

Form pre populated

Forms dont have to save to a Model

```
from django import forms

class ContactForm(forms.Form):
    subject = forms.CharField(max_length=100)
    message = forms.CharField()
    sender = forms.EmailField()
    cc_myself = forms.BooleanField(required=False)

    def save(self):
        #Do anything
        ...
```

Select "Submit" if this information is correct to complete Step 10: Review Electronic Funds Transfer (EFT) Information. After submission, the Review Electronic Funds Transfer (EFT) Verification page will display requesting

Final Verification

Select "Cancel" to return to the Reconciliation Checklist and Step 10 will remain in an "Incomplete" status.

STEP 1: CREATE YOUR FORM

It will only take 4 simple steps for you to create and use your new form. To start, enter a name for your form below. If you have an existing form you want to import, select one of the import methods below. Otherwise, start with a pre-built or blank form.

Form Wizard

*Form Name

*Start With

Pre-built form: Contact Form

Copy an existing form from a webpage

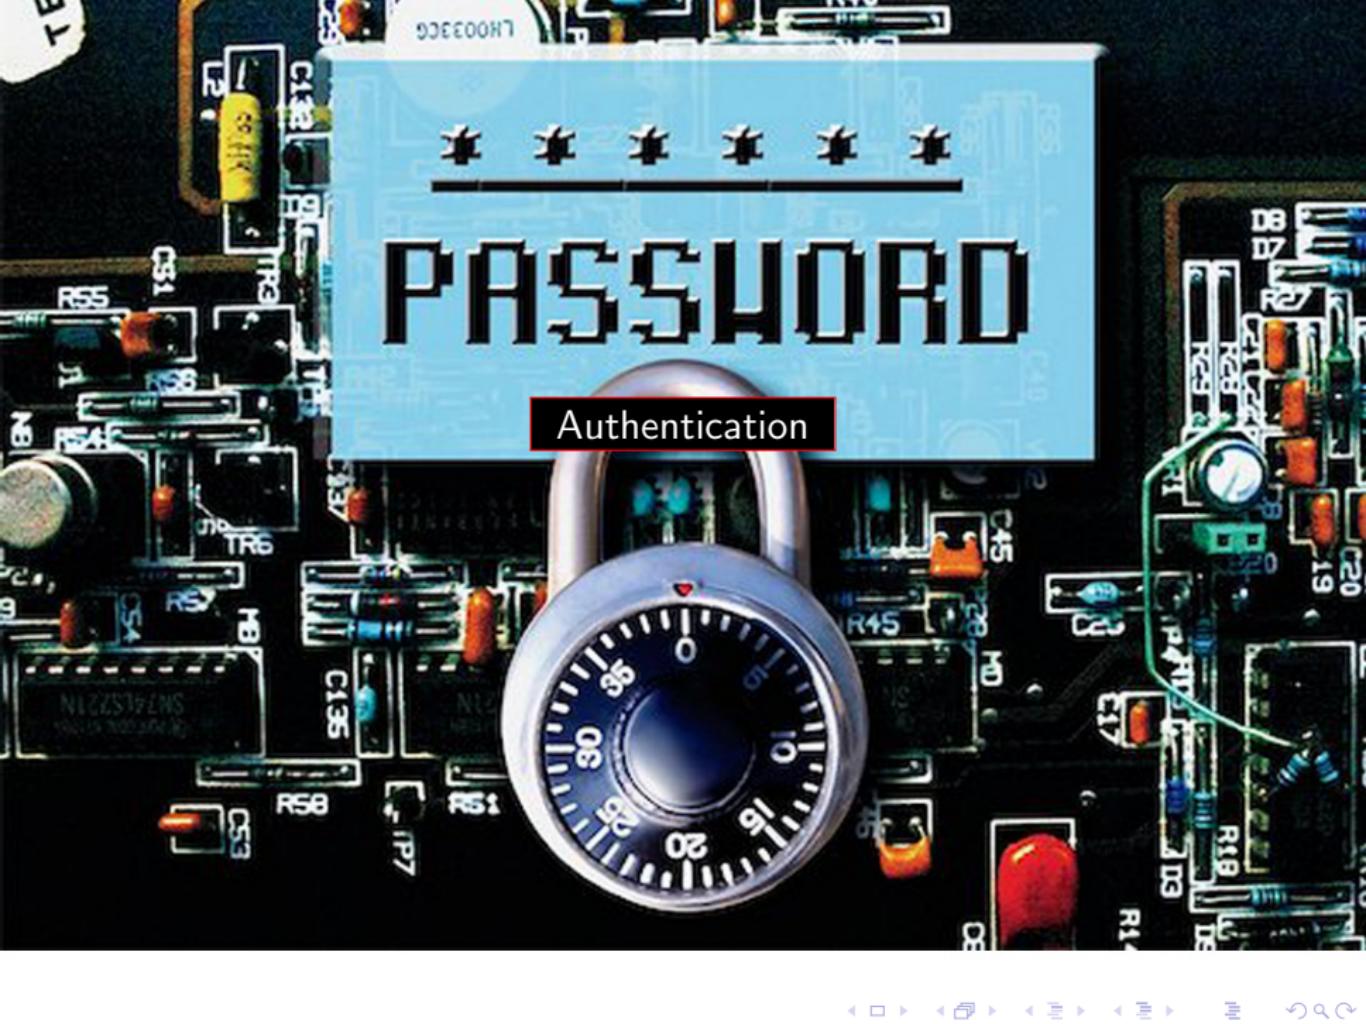

Upload an HTML file containing a form

Blank form

Next Step ►

Form Wizard

```
class ContactWizard(FormWizard):
    def done(self, request, form_list):
        do_something_with_the_form_data(form_list)
    return HttpResponseRedirect('/page-to-redirect-to')
```

PASSWORD

Authentication

Point to url pattern

```
urlpatterns += patterns('registration.views',  
  
    url(r'^login/$', auth_views.login, name='auth_login'),  
    url(r'^logout/$', auth_views.logout, name='auth_logout'),  
    url(r'^register/$', 'register', name='register_view'),  
    url(r'^passreset/$', auth_views.password_reset,  
        name='forgot_password1'),  
    url(r'^passresetdone/$', auth_views.password_reset_done,  
        name='forgot_password2'),  
    url(r'^passresetconfirm/(?P<uidb36>[-\w]+)/(?P<token>[\w-]+)/$',  
        auth_views.password_reset_confirm,  
        name='forgot_password3'),  
    url(r'^passresetcomplete/$', auth_views.password_reset_complete,  
        name='forgot_password4')),  
)
```

Login Required

```
from django.contrib.auth.decorators import login_required

@login_required(redirect_field_name='redirect_to')
def my_view(request):
    ...
```

Authentication backends

```
from django.conf import settings
from django.contrib.auth.models import User, check_password

class SettingsBackend:
    """
        Authenticate against the settings ADMIN_LOGIN and ADMIN_PASSWORD.
    """
    def authenticate(self, username=None, password=None):
        if login_valid and pwd_valid:
            return user
        return None

    def get_user(self, user_id):
        try:
            return User.objects.get(pk=user_id)
        except User.DoesNotExist:
            return None
```

DEAR Stephen,

THANK YOU SO MUCH FOR THE
LOVELY knife . IT IS VERY

sharp , AND IT WILL LOOK

Send to template

sharp , IN OUR kitchen.

I AM SURE IT WILL GIVE US
MANY HAPPY HOURS cutting things.

IT WAS nice TO SEE YOU AT
THE WEDDING, AND WE SHOULD
DEFINITELY MEET UP NEXT TIME WE
ARE IN Canada .

MUCH LOVE, PETER +
Victoria

Generic Views

```
from django.conf.urls.defaults import *
from django.views.generic.simple \
import direct_to_template

urlpatterns = patterns('',
    ('^about/$', direct_to_template, {
        'template': 'about.html'
    })
)
```

reddit and friends

"Normalized data is for sissies" - Cal Henderson

reddit is down. it's turning out to be one of those days, again.

in the meantime, here's a simulated reddit to help you stave off the withdrawal symptoms:

- 1 [We're *so* close to achieving our Haiti relief goal. Let's do it right now!](#) ([dri.com](#))
↳ no comments these links don't go anywhere
- 2 [Usually redditall continues to work during downtimes like this.](#) ([redditall.com](#))
↳ no comments these links don't go anywhere
- 3 [IRC party in #reddittowntime on Freenode](#) ([irc.freenode.org](#)) ([www.google.com](#))
↳ no comments these links don't go anywhere
- 4 [Keep mashing reload; that might help.](#) ([reddit.com](#))
↳ no comments these links don't go anywhere
- 5 [You know about the red button, right?](#) ([www.smbc-comics.com](#))
↳ --

Different blocks need different caching durations

The screenshot displays a web application interface. On the left, there is a grid of small images labeled "Flickr". A large pink circular overlay covers the top half of the Flickr section. To the right of the Flickr grid is a vertical sidebar containing several tweets from different users. A large blue circular overlay covers the bottom half of the sidebar. At the very bottom of the screen, there is a navigation bar with several icons.

I changed my religion. I have just started using and loving emacs.
about 1 hour ago

@sixhsix Where is the new API for accessing from the python console documented?
4 hours ago

@sixhsix how do I authenticate now? Api remains the same?
14 hours ago

@pyconindia that's a nice milestone. I can bet there is going to be atleast as many more
14 hours ago

Any python library to deal with the google apps federated logins, open id? Or any library to start with, atleast, cc @simonw
#lazyweb
22 hours ago

Twitter

Generally Memcache Every page

```
CACHE_BACKEND = 'memcached://127.0.0.1:11211/'  
CACHE_BACKEND = 'memcached://172.19.26.240:11211;\\  
172.19.26.242:11212;172.19.26.244:11213/'
```

Implement a caching decorator

```
from django.core.cache import cache
def cache_for(seconds, fetch=0):
    def cache_it(func):
        def deco_func(self):
            val = cache.get(self.get_cache_key(fetch))
            if not val:
                val = func(self)
                cache.set(self.get_cache_key(fetch), val)
            return val
        return deco_func
    return cache_it
```

Apply on the blocks

```
class TwitterBlock(TwitterSearchBlock):  
  
    template_name = 'content_block_app/twitter_user_bloc  
    ajax_template = "content_block_app/tweets_user.html"  
  
    @cache_for(60*60, fetch=1)  
    def fetch_data(self):  
        import bettertwitter  
        tw = bettertwitter.Twitter(email='umoja_com', pas  
        user_tweets = tw.statuses.user_timeline(screen_na  
    return user_tweets, None
```

Different cache Backends

- Database
- File System
- Local Memory
- Dummy- For Development
